

DIGIDESIGN ICON DCONTROL

The studio of the Maastricht Academy of Music is equipped with a 32 fader Digidesign ICON Dcontrol mixing console.

The ICON Dcontrol is the state-of-art digital console line that has quickly become the top choice for professional music and post-production facilities around the world.

In combination with Protools 11 HDX, a harddisk based recording system, the studio is total recall, making it possible to do different styles of recording sessions during one day.

Besides the easy and flexible workflow, this also offers the option for doing a remix or new edit's from previous recording takes.

More flexibel means more creative, our major goal stays making music.
